

# A SUSTAINABLE CLASSROOM

by « Children of the earth »

The world is dying, and everyone can do something to save it. It starts by us, the new generation. Our study classes are not good for the environment. Our issue is to find how to make it sustainable. We chose to present the class after and before the ecologic evolution in a poster.

**After**

Cut of the wall of the new class room

Labels: sand, Cooked clay, Vegetations

The large windows, which are exposed to the south permit a natural enter of light and the lights of the class are powered by wind and solar energy

The class is warm by geothermal

We decided to use « slate » paint on this wall to optimise the place and to not use felt pen which are toxic

All of the furnitures are made in wood (chairs, desk)

We think children should have « environmental lessons » to make them aware of the situation. We could change things when everyone understands that the problem is serious and more and more urgent.

**Before**

Today's classroom are made in materials wich have a big impact on the environment and our health : table are made in plastic, the paint on the wall and the felt pen are toxic. In some isolants which we use, we can find particles which are very dangerous for our lungs, like « asbestos »

The class of today

The class of future

*Have a breath, have a green class.*
